

How do I translate an entire website into the language of my choice?

GOOGLE TRANSLATE

You can access the translator via Google, click on "Website" and enter the URL you want. Then simply select the language you want from the list

How do I translate an entire website into the language of my choice?

SAFARI

If you have an iPhone, you can easily translate the page you want using Safari:

How Translate a Webpage in Safari

- 1 Launch **Safari** on your iPhone or iPad, then visit a webpage that's in a language you'd like to translate and watch for the icon in the address bar to indicate that a translation is available.

- 2 Tap the **aA** button in the far-left of the address bar, then select **Translate to [Language]** in the dropdown menu. If you don't see the option, the webpage either isn't compatible with Safari's translation feature or the language isn't supported.
